**Dear Hiring Manager,**

I have rich experience as a Front End developer with 3+ years worth of experience building websites and web applications using Vue.js, Nuxt.JS and Word Press. I am also a Junior Power Platform Developer and have recently acquired my **Microsoft PL- 900** and **PL-100 Microsoft certifications** and I am planning to sit for my PL-400 and PL-600 exams soon. I am looking for a new challenge as i embark on my journey to become an excellent Power Platform Developer. My interest with Power Platform development comes from my interest in how the Microsoft Power Platform technologies offer tools to create solutions under an umbrella of parts that are well integrated together, instead of the using different unrelated tools to create solutions.

As a front-end developer i have worked with the following technologies: Vue.js and Nuxt.JS, WordPress to create websites and E-Commerce stores for clients.

As a Junior Power Platform Developer i have hands on experience with the following technologies:

- Power Apps (Model Driven and Canvas Apps)
- Data-verse, SharePoint, Excel Workbook
- Power Automate (Button Flow, Automated Flow, Schedule Flow, BPF)
- AI Builder, Components, Solutions, Data-flows, BPF and many more.

Further more I am always learning and increasing my arsenal of knowledge on how best to use Power Platform tools and other Microsoft services together to deliver the best possible solutions for projects.

I would like to thank you for gauging my talents and potential for the role. My resume and project details will share more about my academic qualifications and employment history. I look forward to further discussing my expertise, how I can contribute and be of value to your organization.

***Sincerely,***

***Terence Junior Sharaungah***
